

Carta

The Intelligent Interface Between Diner and Kitchen.

Confidential Pitch Deck // Vision 2026

The Hardware

2026
supercomputers
sitting on every
restaurant table.

The Software

Frantitaur experience.
Static PDFs that
ignore dietary
restrictions, lack
visual references,
isolate diners, and
provide zero data to
restaurants.

Digitizing the menu (QR) didn't add value—it only changed the format.

The 3-Layer Adoption Strategy

Layer 0: The Frictionless Anonymous Entry

Instant Access: Scan the table QR to launch a responsive web app. No app store installation required.

Appetite Activation: View high-res photos, exact portion sizes via AR 3D models, and the restaurant's Top 3 recommendations.

Safety First: Immediate visibility of ingredients and basic allergens.

This baseline experience is already **10x better** than a static PDF. The incentive to register appears naturally: "Your friends are sharing dishes. Join the table with one tap."

Layer 1: The Social Group Session

1. Dynamic Join

- Diners use 1-tap Firebase Auth (Google/Apple) to join a live session mid-navigation.

2. Shared Discovery

- Send specific dishes to friends' screens instantly without passing a physical phone.

3. Personal Orders, Group Session

- Each diner builds their personal order inside the unified table session.

4. Calling the Waiter

- A synchronized Call Waiter button notifies staff only when everyone at the table has confirmed. The waiter validates before sending to the kitchen.

Layer 2: The Premium Personalization Engine

For \$29 MXN/mo (less than 1 peso a day), Carta becomes an indispensable culinary co-pilot.

Gemma 4 AI Assistant

Craving something spicy but light?

Gemma 4 analyzes the local menu and recommends dishes instantly.

Spicy Tuna Tartare

Grilled Chili Squid

Intelligent Filtering

Grilled Salmon with Asparagus

Safe

Peanut Chicken Satay

Caution

Shellfish Paella

Avoid

Traffic light visuals (Safe / Caution / Avoid) automatically applied to all menus based on the user's deep dietary profile.

Cross-Restaurant Memory

A continuous timeline showing how the AI learns from past visits across the entire Carta network.

Premium Environment

Zero ads, encrypted cloud backups, and advanced personal spending analytics.

The Layered Adoption Ecosystem

Feature	Capa 0 (Anonymous)	Capa 1 (Free)	Capa 2 (Premium)
Visual Menu & AR Models	✓	✓	✓
Monetization	Ad-Supported	Ad-Supported	Ad-Free
Live Group Sessions & Shared Orders		✓	✓
Spending Tracker & Basic Profile		✓	✓
Gemma 4 AI Assistant & Smart Filtering			✓
Cloud Backup & Cross-Restaurant History			✓
<i>Invitado</i> Extra Charity Contribution			✓

The Conversion Trigger: Pricing is set at just \$29 MXN/month (\$249/year)—a fraction of a Netflix subscription. Less than 1 peso a day to always know what to eat.

The Dual-Value Flywheel

B2C Experience

- Diner gets personalized, 3D visual menus
- Scans QR & browses with AI filtering
- Captures precise preference & waste data

B2B Operating System

- Data feeds Restaurant OS
- Restaurant optimizes menu, runs targeted self-serve ads
- Diner receives better recommendations

Erasing Friction: AI-Powered Restaurant Onboarding

1. PDF Upload: Graphic of an old, poorly formatted restaurant menu.

2. OCR Extraction: Tesseract / EasyOCR extracts raw text and structure.

ITEM:
Wagyu Burger

DESCRIPTION:
1/2 lb patty, aged cheddar, caramelized onions, brioche bun

PRICE:
\$24.00

APPETIZERS	
Wagyu Burger	\$2.00
Elegant color and homely textures	
Truffle Risotto	\$3.00
Brookside, Dots and French house	
MAIN COURSES	
Wagyu Burger	\$24.00
Elegant color, 1/2 lb patty, aged cheddar, caramelized onions, brioche bun	
Truffle Risotto	\$15.00
Chosen textures, in paleo-inspired and elegant dishes	
Fresh Bites	\$3.00
Elegant textures, color and lively dips	
Truffle Risotto	\$24.00
Elegant textures, textures and textures, elegant	

4. Instant Digital Menu: Ready for admin review and publishing.

Restaurants don't have IT departments. Carta's AI handles data entry, reducing onboarding time from days to seconds.

The Restaurant OS

Pillar 1

Zero-Friction Onboarding: AI-powered PDF ingestion

A restaurant uploads a static menu; a hybrid OCR (Tesseract) and LLM (Gemma 4) pipeline automatically extracts dishes, prices, and descriptions.

Restaurant uploads a static form; hybrid OCR (Gemma) and LLM fine-tuning automatically extracts AI graphics.

Pillar 2

Self-Serve Advertising: Restaurants can pay to boost specific high-margin dishes or run 2x1 promotions directly within their own digital menu space.

Targeted promotions boost visibility. Example: "Chef's Special: Pan-Seared Salmon" (2x1) boosted within digital menu.

Pillar 3

Advanced Analytics: Real-time data on scan rates, most-viewed dishes vs. ordered dishes, and precise allergen filtering trends to optimize future menu design.

Actionable insights for menu engineering. Compare dish popularity against sales data and track common dietary filters.

The Restaurant Value Ecosystem

Free Essentials

- Infinite auto-generated QRs per table.
- Basic analytics dashboard (scans, top dishes).
- AI PDF import and basic menu management.

Pro Tier (~\$249 MXN/mo)

- Advanced analytics (peak hours, dish comparisons, tabletop order visibility).
- Custom branded QRs with embedded logos.
- Self-serve ad space to push internal promos (e.g., 2-for-1 Margaritas).

The 3D Artist Marketplace

- Restaurants without professional photos can hire verified 3D artists directly inside Carta.
- Fiverr-style model using TripoSR / InstantMesh workflows.

The Inevitable Upgrade

	Traditional QR	The Carta Ecosystem
Visuals	Pinch-to-zoom static text.	3D AR models & high-res photography. 
Memory	Amnesia between visits.	Persistent local profile; learns cross-restaurant preferences. 
Social Coordination	Passing one phone around or individual silos.	Real-time synced group sessions via WebSockets. 
Restaurant Analytics	Blind hit-counters.	Granular behavioral insights and self-serve ad monetization. 
Accessibility	Server reliance for allergens.	Algorithmic traffic-light safety system for diets. 

The Monetization Engine

The Economics of Serverless Scale

Google Cloud Run scales to zero. Carta only pays for compute when users are actively browsing menus. Margins expand exponentially with scale.

Social Impact & Sustainability

ODS 12: Responsible Consumption

Premium users track their post-meal leftovers. Carta learns these patterns to suggest optimized portion sizes and shared dishes, directly reducing restaurant food waste.

ODS 2: Zero Hunger

A portion of every \$29 MXN Premium subscription is routed to partner NGOs. Carta transforms a software subscription into an emotional perk: Every month, you invite someone vulnerable to eat.

The Impact Equation

$$\left[\begin{array}{c} \text{Carta Premium} \\ \text{Subscription} \end{array} \right] = \left[\begin{array}{c} \text{Zero Ads} \\ \text{\& AI} \end{array} \right] + \left[\begin{array}{c} \text{Meals for the} \\ \text{Vulnerable} \end{array} \right] + \left[\begin{array}{c} \text{Reduced} \\ \text{Food Waste} \end{array} \right]$$

Invitado Extra

~\$5 MXN from every premium subscription goes directly to allied NGOs to feed vulnerable populations. The user's profile tracks "Meals Provided".

Food Waste Tracking

Post-session logging allows users to track untouched food, while Pro restaurants receive aggregated data to optimize portion sizes.

Carta is not just the modern way to order. It is an engine to reduce global food waste and ensure that as we dine out, others are invited to the table.

The Evolution Roadmap

Phase 1: The Core Utility

API backend, PDF menu ingestion, basic QR generation, static visual menus.

Phase 2: Visuals & Social

Introduction of 3D/AR model-viewer, WebSockets for synchronized table sessions, and Apple/Google Auth.

Phase 3: Deep Personalization

Rollout of **\$29 MXN** Premium tier, local-first dietary profiles, smart traffic-light filtering, and restaurant Pro dashboards.

Phase 4: The AI Ecosystem

On-device Gemma 4 conversational assistant, cross-restaurant recommendations, and the 3D Artist Marketplace rollout.

The Future of Gastronomic Connectivity

Pre-Arrival Ordering:

Expanding the Carta interface from the restaurant table to the commute.

Carta Certifications:

Evolving into the Michelin Guide of Sustainability with badges for zero-waste and ethical sourcing.

The Network Effect:

As users map their preferences and restaurants digitize their offerings, Carta becomes the definitive global graph of culinary data.

The menu is just the beginning.
